

Game Registry: Use-Case Descriptions

Refer to the Use-Case Diagram for a visual representation of our use cases

UC-01: Add new game

- **Primary actor:** Admin user
- **Preconditions:** The Admin User has access to the system.
- **Postconditions:** New game is stored in database and registry is updated
- **Includes:** input new game's info
- **Extends:** Update registry

Main Flow

1. The Admin User selects "Add New Game."
2. The system includes the "input new game's info" use case
3. The Admin enters the required information.
4. The system generates a unique ID for the new game
5. The system stores the new game information in the database.
6. The system updates the registry
7. The system displays a confirmation message

Alternative Flow

- If required fields are missing, the system requests the Admin to complete them before proceeding.

UC-02: Remove A Game

- **Primary Actor:** Admin User
- **Preconditions:** The Admin User is authenticated and confirmed
- **Postconditions:** The selected game is removed from the database and the registry is updated.
- **Includes:** choose game to delete, confirmation
- **Extends:** Update registry

Main Flow

1. The Admin User selects "Remove A Game."
2. The system asks the Admin to choose the game to delete.
3. The Admin selects the game to remove

4. The system includes the “confirmation” use case
5. If Yes is selected, the system removes all information of the selected game from the database.
6. The system updated the registry
7. the system displays a confirmation message

Alternative Flow

- If No is selected, the deletion process is cancelled.
- If the game is not found, the system displays an error message.

UC-03: View Games

- **Primary Actor:** Regular User
- **Secondary Actor:** Admin User
- **Preconditions:** The user has access to the system.
- **Postconditions:** Game information is displayed
- **Includes:** view generalized/thumbnail game information
- **Extends:** view specific game information

Main Flow

1. The user selects view games
2. The system includes view generalized/thumbnail game information
3. The system displays a list of available games in thumbnail/generalized format

Extension Flow

4. If the user selects a specific game, the system extends to view specific game information
5. the system retrieves the detailed information of the selected game from the database
6. the system displays the detailed game information

UC-04: Play a Game

- **Primary Actor:** regular user
- **secondary actor:** Admin user
- **Preconditions:** the selected game exists in the database
- **postconditions:** the game is launched successfully
- **Includes:** select game to play, select opponent

Main Flow

1. The user selects 'play a game'
2. The user selects a game to play
3. the user selects a game from the list
4. the system includes select opponent
5. the user selects an opponent
6. The system retrieves the game start command from the database
7. the system executes the start command
8. the game runs successfully

Alternative Flow

- if the start command cannot be retrieved, the system displays an error message
- If the game fails to run, the system informs the user

UC-05: Confirmation

Primary Actor Admin User

Preconditions: A critical action has been initiated

Postcondition: the system proceeds or cancels based on user confirmation

Main Flow

1. The system prompts the Admin with a confirmation message (yes/no)
2. The admin selects an option
3. if yes is selected, the system proceeds with the action
4. if no is selected, the system cancels the action.
